## Amazon Voice Service (AVS)

StreamUnlimited provide an AVS integration in the StreamSDK software stack, enabling product manufacturers to go beyond basic smart speakers to produce premium audio products with Amazon Alexa voice control.

StreamSDK uses AVS and its core skills to add voice control to connected products with built in microphones and speakers.

Alexa, Amazon's cloud based voice service, enables consumers to interact with the technology that they use daily via music content streaming, smart home integrations, news feeds, weather updates, timers and much more.

## Why StreamUnlimited?

- Multidimensional StreamSDK enables the design of audio products with Alexa enabled, including connected Soundbars, AVR's and premium sector applications.
- Hardware agnostic software with options to use existing hardware, or to select a compatible module from the StreamUnlimited portfolio.
- Customisable software including online music services and multiroom streaming.
- Build your iOS and Android App quickly, using our customisable framework.
- A proven engineering team with a portfolio of premium voice assistant audio products released into the market.

## StreamUnlimited Hardware and StreamSDK software: the complete solution

Combining the Stream1832 and Stream810 hardware modules and StreamSDK software with integrated Amazon Voice Service, StreamUnlimited offer a complete solution.

Onsite support is available from our engineers in Asia, along with development kits targeted to optimise product time to market.
