

Google Assistants

Google Assistant and StreamSDK

Fully integrated into StreamSDK, the Google Assistant (GVA) implementation from StreamUnlimited has already enabled 6 brands to bring products to market, including the first GVA enabled connected Soundbar.

Google Assistant enables your product with the ability to control a multi-room audio experience through Chromecast built-in, control smart home automation devices, ask questions and manage schedules.

The StreamUnlimited difference:

- Technical consultation, aligning product development requirements with hardware selection and a “built-in” or “works with” software solution.
- Certified hardware modules, in production and designed for performance.
- Flexibility in software also offers support for custom HW integration if required.
- Highly skilled and experienced engineering team, proven by a portfolio of completed products in the marketplace.
- Project support from Google product plan submission through to productisation, testing and certification.

Stream1832 Hardware and StreamSDK software: the complete solution

Combining the Stream1832 hardware module and StreamSDK software with integrated Google Assistant and Chromecast built-in, StreamUnlimited offer a complete solution and development kits to produce reference products for business generation.

Onsite training and support is available from our engineers in Asia, enabling you to present a product ready design to your customers.
