

Chromecast built-in

Description

Extending your reach by bringing Chromecast built-in to your audio products is a core engineering activity offered by StreamUnlimited. It is available as add-on to our feature rich StreamSDK as well as a stand alone feature. The Chromecast built-in implementation is silicon independent and can be mixed with other streaming audio functionality. We can perform the entire range of activities from original implementation, porting, integration, optimization, acting as testing and certification centre, as well as developing extensions for new monetization possibilities.

We are the maintainer of the Chromecast built-in library for TI Sitara CPU's as well as for the Freescale i.MX family.

Additionally we are experienced on a vast variety of embedded platforms and streaming frameworks, ensuring portability between platforms in our work (e.g. Broadcom, Marvell, etc.).

With our background in developing complete connected Consumer Electronic products and online services implementations we can support you in making your product ready for Chromecast built-in which provide seamless experience for the consumers.

Additionally, StreamUnlimited is the Certification Centre for Chromecast built-in multi-room. Therefore we offer a one stop all in one integration and certification.

Start your design-in today, based on StreamVienna modules, 3rd party modules or your own hardware solution.

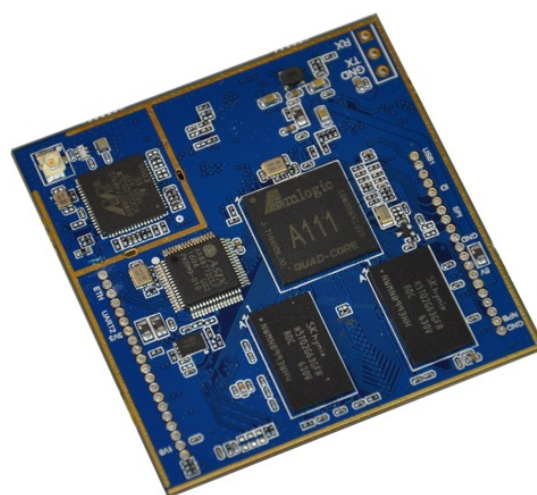

The Whole Chain

Depending on your needs we can offer the whole chain or parts of it: product specification, architecture, hardware development, software development, integration work, EMC, test, release and industrialization.

Chromecast built-in Multi-Room Certification

StreamUnlimited is the Certification House for Chromecast built-in multi-room. We offer the complete certification process in a handy manner, fast and reliable.

StreamUnlimited is an integrated embedded engineering house focusing on innovative and quality products. We have high level competences in Connectivity and User Interface Technology, powered by a strong background in Audio and Video. Alongside providing development and integration services to a diverse customer base, StreamUnlimited also offers a range of fully featured products.
