

Stream810

iMX7dual Audio Streaming Module

The versatile and flexible Stream810 module is the ideal base for your next generation connected product. It enables you to add UPnP/DLNA, USB, Internet Music, AirPlay and Google Cast™ to any product. Control can be done via local keys, remote control, smartphone apps, host controller or simply using the included web based user interface. In addition to that you can distribute any audio content to several rooms - fully synchronized - using a standard network connection. The system relies on a powerful dual-core iMX7d audio CPU which provides enough headroom for future applications.

Features

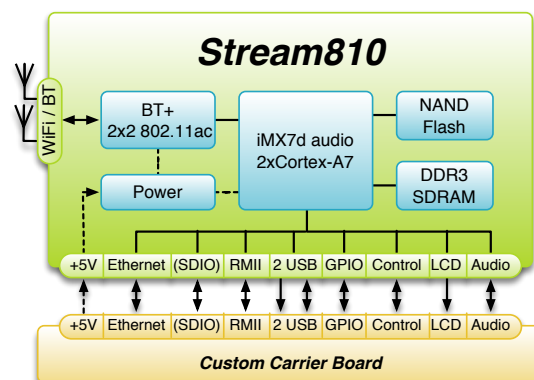

- Ethernet, dual band Wi-Fi 2x2 802.11 a/b/g/n/ac
- Bluetooth 4.2 / BLE
- UPnP/DLNA/AirPlay/USB/Bluetooth local content access
- Various online music services and Google Cast™
- Advanced clock sync for multi-room & multichannel
- Playback of all common audio formats
- Support of HD formats (up to 384kHz/24Bit)
- DSD support (DOP, DSF)
- Multichannel audio input and output, TDM support
- Local UI with skinning support
- Control via local user interface, Smart Phone App, web user interface and voice input
- Small form factor
- Pin-compatible to other StreamVienna modules
- Advanced security features

Possible Product Variations:

- Audio streaming clients controlled via a local user interface, Smart Phone Apps, web based user interface and voice input
- Audio/Video receivers
- Active speakers with streaming
- Building and home automation control panels or clients
- Distributed or central server based multi-room systems with multiple audio sources and sinks
- Wi-Fi IoT devices

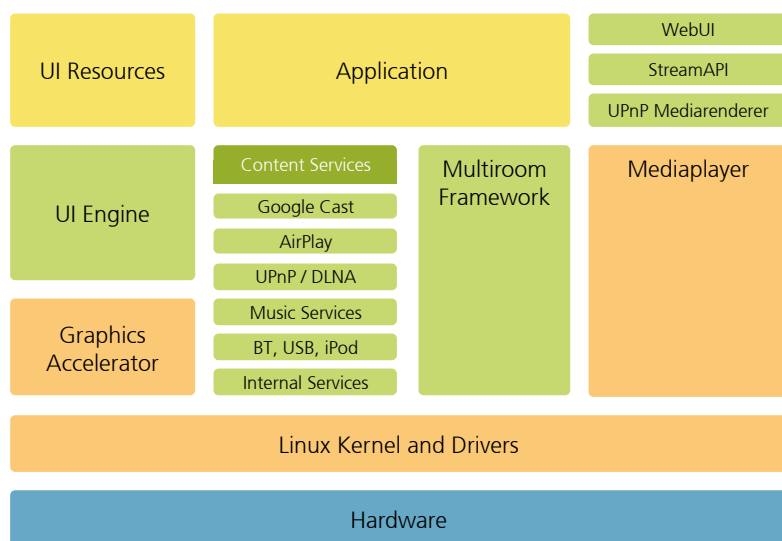

General Benefits

- Reduced development costs and time-to-market
- Software is simple to customize
- Module is in production / reference carrier board is available
- Different configuration options available
- Design-in support and customization services available
- Long term availability and maintenance provided by StreamUnlimited
- Smart Phone/Tablet control apps available
- Long availability of the module due to strong key component life cycle management.

Online Services

- Spotify, Tidal, Rhapsody, SiriusXM, TuneIn, Airable, vTuner, Deezer, etc.
- Other services on request
- Framework for rapid integration

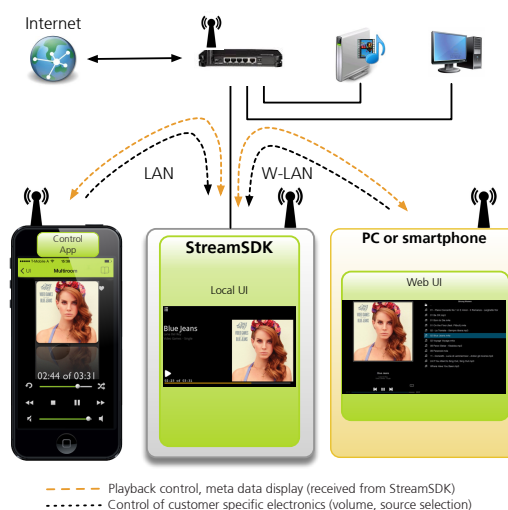

SW architecture

- Engineered from scratch to meet all requirements of next generation audio streaming clients
- Modular design - high flexibility
- Unified API for all content services
- Mediaplayer based on GStreamer
- UI engine allows easy customizations
- Highly portable SW stack
- Continuous quality control of all core SW components/ automated tests
- Full documentation is available
- Linux based

Interfaces/Connectivity

- 1.27 mm pin header connector dual/single row
- Wi-Fi 2x2 802.11a/b/g/n/ac - dual band
- Bluetooth 4.2/BLE
- Ethernet 10/100 Mbit/s
- SDIO interface option (SD card, alternative Wi-Fi, etc.)
- 2x USB 2.0 OTG with iPod digital audio
- GPIOs, LCD
- Control interface to carrier board (I²C, SPI)
- Multichannel digital audio inputs and outputs (I²S, TDM, microphone array)

Options for control

- Local user interface
- Smart Phone App using StreamConLib (iOS, Android)
- Web user interface
- Host controller
- Voice services

StreamUnlimited is an integrated embedded engineering house focusing on innovative and quality products. We have high level competences in Connectivity and User Interface Technology, powered by a strong background in Audio and Video. We provide development and integration services to our customers. StreamUnlimited also offers a range of fully featured digital modules.
